
Applied Arts, Sciences & Technology Progress Fund

Yuba College has a lot of new young faces on its faculty. These new faculty come to Yuba College with both enthusiasm and new ideas. While the funding from both the State of California and the successful bond measure will help to provide them with new and upgraded buildings, equipment and supply money is less easily obtained.

The Applied Arts, Sciences and Technology Progress Fund allows Dean Earl Bloor to assist these faculty in getting the support they need to provide materials for programs such as engineering, math, physics, welding, astronomy, chemistry and biology.

Donations to this fund recently provided a Rich Correa, faculty member in the architecture program, to purchase a color printer for students learning to do design and blueprints.
